## Tutorial 7 (Week11): Functional Dependencies

1. Consider a relational schema  $R$  with attributes sets  $X, Y, Z \subseteq R$ . Use Armstrong's Axioms to prove the following rules:
  - a. **Union rule:** If  $X \rightarrow Y$  and  $X \rightarrow Z$ , then  $X \rightarrow YZ$
  - b. **Pseudo-transitivity:** If  $X \rightarrow Y$  and  $Z \rightarrow W$  and  $Z \subseteq Y$ , then  $X \rightarrow W$
2. Consider  $R(A, B, C, D, E)$  with FDs  $F = \{ \{A,B,C\} \rightarrow \{E\}, \{B,D\} \rightarrow \{A\}, \{C,G\} \rightarrow B \}$ .
  - a. Use Extended Armstrong's Axioms to show that  $F$  implies  $CDG \rightarrow E$ .
  - b. Compute  $CDG^+$
  - c. Find all the keys of  $R$ .
3. Consider the set of functional dependencies  $F = \{ \{A\} \rightarrow \{B\}, \{C\} \rightarrow \{D\}, \{B,D\} \rightarrow \{E\}, \{D\} \rightarrow \{A,D\}, \{A,C\} \rightarrow \{E,B\} \}$  on the relation  $R(A, B, C, D, E)$ .
  - a. Give an example instance of  $R$  that complies with the functional dependencies.
  - b. Give an example instance of  $R$  that violates the functional dependencies.
  - c. Give an example of a trivial functional dependency in  $F^+$ .
  - d. Give an example of a completely non-trivial functional dependency in  $F^+$ .
  - e. Compute a minimal cover of  $F$ .
