CS2102 Database Systems

Slides adapted from Prof. Chan Chee Yong

LECTURE 00

ADMIN MATTERS

Prerequisites

Advanced programming

- CS1020/E
- CS2020
- CS2030
- CS2040/C
- You will need to code for project, in a programming language you might have to learn (e.g., JavaScript, Python, PHP, etc)

Discrete Mathematics

- o CS1231
- MA1100
- You need a good understanding of logic for the second half of the module (functional dependencies and normal forms)

Learning objectives

The aim of this module is to introduce the fundamental concepts and techniques necessary for the understanding and practice of design and implementation of database applications and of the management of data with relational database management systems.

The module covers practical and theoretical aspects of design with entity-relationship model, theory of functional dependencies, and normalization by decomposition in third and Boyce-Codd normal forms.

The module covers practical and theoretical aspects of programming with SQL data definition and manipulation sublanguages, as well as relational algebra/calculus.

Learning objectives

Specifics

- How to design an entity-relationship data model to capture the data requirements for an application and translate the conceptual data model to a relational database schema
- How to refine a relational database schema using schema decompositions to avoid update anomalies
- How to use SQL to define relational schemas and write SQL queries on the schemas
- How to reason about the correctness of relational queries based on the concepts of formal query languages (relational algebra/calculus)
- How to apply knowledge of relational database systems to develop database applications

Workload and assessment

Number of credits = 4

Workload per week = ~10 hours

Lecture2 hours

Tutorial1 hour

Assignment & Project 4 hours

Preparatory3 hours

Tentative module assessment (maybe shifted $\pm 5\%$)

Tutorial attendance & participation

Assignments15%

Team projects20%

Midterm assessment20%

Final assessment40%

Lectures

Lecturer

Adi Yoga Sidi Prabawa

• Email: dcsaysp@nus.edu.sg

Office: COM2-02-55

Phone: 6516-6520

Monday, 1600-1800

I3 Auditorium

Web lectures

- Lectures will be recorded and made available on IVLE
- Web lectures are meant to reinforce revision & learning
 - They are not to be used as substitute for attending lectures

Lectures

Week	Topic
1	Admin matters & light introduction (self-read) [public holiday]
2	Introduction
3	SQL #1
4	Entity relationship data model
5	SQL #2
6	SQL #3
	Recess Week
7	Application development with SQL
8	Midterm assessment [Up to week 7 materials]
9	Schema refinement: functional dependencies
10	Schema refinement: functional dependencies & normal forms
11	Schema refinement: normal forms [public holiday; makeup]
12	NoSQL & NewSQL
13	Course review

Tutorial

Teaching Assistants

- Aaron Seah Ter Chuen
 - e0266255@u.nus.edu

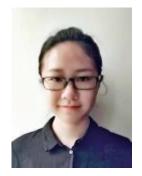

- Lim Cheng Yang
 - e0203248@u.nus.edu

- Wang Jinyi
 - e0037325@u.nus.edu

- Yang Shuqi
 - e0253743@u.nus.edu

Tutorial

Specifics

- Duration 45 minutes
- Start week 3

Materials

- Only selected tutorial questions will be discussed in class
- Students will be *pre-assigned* to discuss selected questions

Marking

- Attendance 2%
- Participation 3%

Assignments

Individual assignments

Tentative deadlines

 Assignment #1: File processing 	Week 3
 Assignment #2: Entity-relationship model 	Week 5
 Assignment #3: SQL 	Week 7
 Assignment #4: Schema refinement 	Week 12

Project

Objective

Develop a web-based database applications

Team project

- Each team consists of 4 members (±1 based on divisibility)
- Team members could belong to different tutorial groups
- Team registration using <u>Luminus</u> will be opened by end of Week 2
- Teams to be formed by the end of Week 3
- If you are unable to form a team or you belong to a team with fewer than 4 members, you may be assigned/reassigned to a random team

Project

Deadlines

 Project team registration 	Week 3
 10-min alpha demo 	Week 8
during tutorials	
 Report and code submission 	Week 12
 20-min final demo 	Week 13

Important dates (summary)

Assessments

 Midterm assessments 	30 September 2019	week 8 lecture
 Final assessments 	27 November 2019	> week 13

Projects deadlines

 Team registration 	31 August 2019	end of week 3
 Alpha demo 	15 October 2019	tutorial of week 9
Report & code	09 November 2019	end of week 12
 Final demo 	12 November 2019	tutorial of week 13

Assignment deadlines

 File processing 	31 August 2019	end of week 3
 Entity-relationship model 	14 September 2019	end of week 5
• SQL	05 October 2019	end of week 7
 Schema refinement 	09 November 2019	end of week 12

Make-up lecture

Lecture #11	03 November 2019	Saturday of week 11
-------------------------------	------------------	---------------------

Course policies

Students' responsibilities

- Attending lectures & tutorials
- Checking Luminus & emails for course-related announcements
 & updates

Late submission policy

 Late assignment/project submission will NOT be accepted without prior approval from the lecturer

Lecture slide

- Lecture slide may contain empty spaces for you to write during lecture
- A more completed slide (without animation) will be released after the lecture
- Lecture slide will contain all necessary examinable materials

Course policies

Material clarifications

- For clarifications on lecture materials, the best way is to make use of Luminus discussion forum
- Questions emails to the lecturer may be posted (anonymously) to Luminus and answered there

Office hours

- My office is at COM2-02-55
- Official office hours for consultation
 - Wednesday 1200-1400
- You may email (<u>dcsaysp@nus.edu.sg</u>) to arrange for consultation sessions
 - Alternatively, if you see my door opened or light on, just knock on the door

Plagiarism policy

All students share the responsibility for upholding the academic standard and reputation of the University. Academic honesty is a prerequisite condition in the pursuit and acquisition of knowledge. Academic dishonesty is any misrepresentation with the intent to deceive or failure to acknowledge the source or falsification of information or inaccuracy of statements or cheating at examinations/tests or inappropriate use of resources. There are many forms of academic dishonesty and plagiarism is one of them. Plagiarism is generally defined as the practice of taking someone else's work or ideas and passing them off as one's own (The New Oxford Dictionary of English). The University does not condone plagiarism

http://www.comp.nus.edu.sg/cug/plagiarism/

Plagiarism policy

Students should adopt this rule – You have the obligation to make clear to the assessor which is your own work, and which is the work of others. Otherwise, your assessor is entitled to assume that everything being presented for assessment is being presented as entirely your own work. This is a minimum standard.

A student may not knowingly intend to plagiarize, but that should not be used as an excuse for plagiarism. Students should seek clarification from their instructors or supervisors if they are unsure whether or not they are plagiarizing the work of another person.

http://www.nus.edu.sg/registrar/adminpolicy/acceptance.html

Plagiarism policy

Any student found to have **committed** or **aided** and **abetted** the offence of plagiarism may be subject to disciplinary action. In addition, the student may receive a reduced grade (possibly even zero mark) for the relevant academic assignment, project, or thesis; and could receive a failed grade for the module. Any student caught plagiarizing will be required to retain the plagiarized module as graded, and will not be allowed to exercise the S/U option for that module.

- This includes
 - Giving your answers to a friend
 - Using your friends' answers as your own
- We have <u>zero-tolerance</u> policy for plagiarism in this module

Conventions

Mathemathese (or, what would the Lecturer say to look smart)

- This includes formal definitions, etc
- Will be colored green-ish
- Will typically be accompanied by explanations and/or examples

Keywords (or, what you need to look out for)

Will be colored red-ish

Code (or, what would programmer say to look smart)

- This includes pseudo-codes, etc
- Will be in monospace font such as consola

Tools

Database

- PostgreSQL
 - https://www.postgresql.org/download/
 - Interactive installer by EnterpriseDB

Repository

- Git
 - https://git-scm.com/book/en/v2/Getting-Started-Installing-Git
